

## Well Integrity Chronology – Gregory Oberley

August 11, 2011

June 9, 2011-Sent email to Tom Kropatsch and Gary Strong (WOGCC) requesting:

A written summary of the well integrity record review process that was conducted.

I forwarded some thoughts on what EPA felt needed to be included in the actual well integrity field testing method

I also requested an electronic copy of the wells an information that were reviewed for casing and cementing issues.

I requested that this be done in order to have a written record of the process that is being carried out for well integrity not just for my own record but in order to present a record to the public what was reviewed and what were the criteria that was used for the review and what were the results. Currently, I still only have a hard copy of the results (a list of wells that WOGCC came up with).

July 9, 2011– I received an email from Kirsten Derr (EnCana) with a number of documents including one on a well integrity testing procedure. There was no request for comments only and indication that work on well integrity was being planned. There was also no indication that BLM, WOGCC, Tribal, or DEQ workgroup members had any review or approval.

I received the EnCana email at 4:30pm on a Friday as I was preparing for a field trip, I did not see this email until the 1<sup>st</sup> week of August. I had been expecting an email from WOGCC (either Tom Kropatsch or Gary Strong) responding to my June request. I am responsible for sorting through my email but I just simply missed this one that needed a more timely response.

August 11, 2011-Meeting with Nathan Wiser, Tricia Pfeiffer and Ron Mellor to discuss the EnCana testing procedure. Wrote up comments Aug 23 on Encana proposed approach.

Aug 31, 2011- Greg indicated at work group meeting that EPA had concerns regarding Encana's proposed testing procedure- handed out comments.

Oct 8, 2011—Greg reminded Gary that the work group needed to discuss concerns with what Encana had done
